

SHIPPING

CAREFULLY DELIVERED ON TIME, EVERY TIME

At MST, no order is considered complete until it's been safely delivered to you. All cold-drawn tubes and pipes receive minimal handling in our facility so they maintain excellent surface finish. Our shipping specialists ensure the final products are carefully packaged in bare bundles using metal straps. Only overhead crane loading is allowed, and all shipped products require tarping with straps – not chains, which can potentially harm the surface finish. Our work isn't done until you've received your order, and the entire MST team works together to make certain all of our products reach their destination on time, every time.

We Offer:

- Non-standard sizes
- Custom bundle sizes
- Expedited deliveries
- Melted and manufactured in the USA
- Min mill quantities:
2000# pressure tubing
2500# mechanical tubing

IT'S ABOUT TIME.

Expert Exporting Assistance

To assist with all of your exporting needs, we have a talented team of export specialists who are effective, efficient and very easy to work with. If you're exporting tube and pipe overseas, our specialists can help with every aspect of your export, including documentation and other requirements specific to your shipment. Count on our team to deliver the answers you need.
